

MISSION PLANNING/MISSION DEBRIEFING SYSTEM ENGINEER

Stans, Switzerland

Our department Mission Support and Simulation has an immediate opening for a Mission Planning/Mission Debriefing System Engineer.

This challenging position involves:

- Liaison with suppliers on a technical level, including programme management
- Analysing user requirements
- Conduct design review meetings with end users and suppliers, and actively participating in designing the architecture of new software programs
- Writing and reviewing system requirements, system tests specifications, technical specifications and test plans

For this position you are required to have the following skills and background:

- Hold an software engineering or equivalent degree and have at least 5 years of relevant engineering experience
- Very good understanding of software architecture and software programming in C, C++ or C#
- A knowledge of 3D rendering software engines will be an advantage
- Very good English language skills, both verbally and in writing, a working knowledge of German language will be an advantage
- A self-starter mentality with good team player skills and ability to work to tight deadlines

For further information please contact Roberto Fontana, Group Leader Mission Supp. & Simulation, phone +41 41 619 60 69.
